## Increase efficiencies and security in retail operations

As cash transactions increase worldwide, retailers are increasingly looking for new ways to protect against shrinkage and robbery while cost and time savings remain a primary concern. Increased security, productivity and operational efficiency can be achieved through a cash management solution that handles cash transactions quickly and efficiently.

Although retail cash usage is particularly strong, it comes with specific challenges for retailers:

- **Security risks:** retail robberies are on the rise, costing money and putting staff at risk of bodily harm
- **Lost time:** non-standardized and manual cash reconciliation processes can be time-consuming, limiting the time spent on sales and customer service
- **Shrinkage:** the average shrinkage is causing important losses in the retailer's revenues
- **High costs:** back-office tasks cost time and staff resources

### Complete self-service cash management made easy

The SafeRecycling RS7 is a self-service cash recycling system that combines depositing and dispensing capabilities in one convenient solution. You can quickly and securely fill, replenish and reconcile

tills. Since notes can be withdrawn and deposited, you benefit from a closed cash cycle, resulting in less emptying and filling machines, and lower administration costs.

The RS7 is supported by proven technologies for note and coin recyclers that were used in the bank sector. It has been specifically designed for the back-office areas of big retail outlets.

#### BENEFITS

- Increased security and reduced risk of robbery as notes are stored in a certified safe
- Real-time cash monitoring via CashControl software, allowing remote tracking and reporting of cash levels
- Time savings via simplified till opening and balancing
- Cost savings through improved collection planning
- Simple and easy-to-use system with no need to train operators and supervisors on new procedures or systems
- No manual paperwork required
- Pre-credit\* of the cash amounts deposited in the machine. Details of the cash amounts are automatically sent to the bank, allowing the retailer's account to be pre-credited.

\* Pre-credit is submitted to the cooperation and authorization of the bank.

## Increase efficiencies and security in retail operations

Gunnebo is a leader in the retail cash management sector with extensive experience working with retailers and other major players in the cash cycle. The RS7 is particularly suited to large supermarkets, shopping malls, and entertainment venues such as casinos, arenas and stadiums.

### Step 1: Filling

Depending on authorization, select a pre-defined mix for your tills or choose from a selection of mixes. To make filling easier, coins are delivered by denomination in a bowl with a dispensing speed of up to a maximum of 24 coins per second, when all 6 hoppers dispense simultaneously. Direct filling of the till is also possible.

### Step 2: Refilling

Replenish certain denominations up to a pre-defined limit throughout the day. A head cashier can also perform these actions on behalf of several cashiers.

### Step 3: Reconciling

Deposit bundles of up to 300 notes or the complete till with coins all at once. Up to 700 coins in 6 denominations can be counted and sorted per minute and up to 10 notes counted per second. Funds are automatically counted and authenticated, and a receipt is issued.

### Step 4: Monitoring

Continuously track the real-time cash level of each safe using Gunnebo's CashControl web-based monitoring software. This software can either be hosted by you or Gunnebo, and you can choose to run the program locally or centrally.

## TECHNICAL DATA

### COINS

Sorting speed	700 coins/minute
Sorting capacity	Up to 6 hoppers
Coin capacity	10,700 coins + overflow of up to 10,000 coins
Dispensing speed	Up to 24 coins/second simultaneously
Coin dispensing	Coins are sorted by denomination into separate coin bowls and stored in a lockable drawer

### NOTES

Counting speed	Up to 10 notes/second
Note bundle	Up to 300 notes/deposit (multiple deposits) continuous feed
Recycling capacity	Up to 8 denominations
Banknote capacity	5 cassettes between 2,250-3,400 notes each, up to 17,000 notes

Availability	24/7 self-service
Operation	Freestanding
Dimensions	46.6 x 63 x 33.4 inches
Weight	1940 lbs. (empty) – 2271 lbs. (filled)
Power supply	120V, 60Hz

## FEATURES

- **Operation modes:** configuration as a pure cash-in or cash-out terminal, combined cash-in/cash-out terminal or full recycler, or can be used to exchange notes for smaller or larger denominations
- **Advanced user interface:** 15" touch screen that guides the user through each transaction
- **Counterfeit rejection:** optical, ultraviolet, infrared and magnetic sensors that remove suspect money and poor quality notes from circulation
