

Deposit D51/D52

Note deposit solution for improved cash management and same-day credit

Deposit D51/52 is designed to make life easier for retailers. Bundles of up to 30 notes can be deposited into the machine at once and the totals are automatically recorded and monitored. This relieves employees of cash-counting responsibilities and other back-office administrative tasks.

At the same time, Deposit D51/D52 helps improve cash management. The retailer benefits from same-day credit and by monitoring real-time cash levels, alerting the cash-in-transit (CIT) partner when pick-up is due. Since the notes are deposited into a Grade III equivalent safe in a high capacity bag, collection is quick, simple, and secure.

Through touch-screen identification, user details are also logged for complete transaction transparency. And since the cash amounts can always be monitored, this eliminates any cash-counting discrepancies.

Deposit D51/D52 makes up part of Gunnebo's complete range of cash deposit, collection, and recycling solutions for retailers.

Note deposit solution for improved cash management and same-day credit

Configuration

All front-end interactions with the Deposit D51/52 are carried out using a touch screen. This means to initiate a deposit, employees will only need to enter in their unique, personal identification code. Not only is this more convenient for workers, it is also more secure than a card or key could easily be lost or stolen.

For speed, bundles of up to 30 notes can be fed into the machine at once. The notes are instantly counted with the total displayed on the screen before a receipt showing the amount deposited is printed.

For convenient CIT pick-up, the notes are sent straight into a bag which is unique for a deposit safe of this kind. The bag is then housed in a safe with UL291 protection.

Cash management and monitoring

The real-time cash level of each safe can be continuously tracked using CashControl, Gunnebo's web-based monitoring software. This can either be hosted by Gunnebo or by the retailer who may choose to run the program locally or centrally.

Access to the system may be granted to CIT partners to help optimize route planning and pick-up times. Gunnebo service may also be connected to monitor the technical status of a series of machines so that maintenance and updates can be carried out before a problem occurs.

Same-day credit

As soon as notes are deposited, details of the amounts can be sent to the bank allowing the retailer's account to be credited that working day. (Please Note: This can only be done with the cooperation of a bank).

Quality and environmental management systems

Deposit D51/D52 is manufactured in accordance with ISO 9001 for Quality Management Systems and ISO 14001 for Environmental Management Systems.

TECHNICAL DATA

Orientation	Freestanding frontload
Safe	UL 291
Lock	Wide variety of locks possible, standard mechanical key lock
Deposit capacity	Bundle up to 30 notes, multiple deposits possible
Deposit speed	26 notes/minute
Bag capacity	Up to 10,000 notes (parameters to program, either volume or value) 1
Note acceptors	1 (D51)/2 (D52)
User interface	15" Touch screen
User identification	ID via touch or Magnetic card (optional)
Dimensions	22.0x19.7x58.3 in. (WxDxH incl. PC.)
Weight	948 lbs. empty, Full 1,102 lbs.
Power supply	110V, 60 Hz/220V, 50 Hz
Power consumption	65W (Idle state), 85W (Normal operation)
Operating condition	T 45–113 °F, H 20–80%

BENEFITS

- Improved cash management
- Less back-office administration
- Real-time monitoring of cash levels
 - better CIT service
- Same-day credit (optional)
- Complete transaction transparency
 - no cash discrepancies

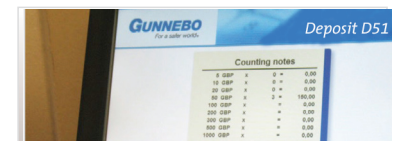

STEP BY STEP

1. User enters ID code via the touch screen

2. Notes are fed into the safe (up to 30 at once)

3. Notes are counted and the deposit total is displayed on the screen

4. User is given a receipt for the cash deposit

5. Notes are deposited into a high capacity bag with self-closing lid which can be quickly and easily collected by CIT
