Deposit D180/D300

Cash management for today's retailers

Cash handling is here to stay. Despite the increase in alternative payment methods such as credit and debit cards, cash remains the preferred payment method around the world year after year, representing more than 80% of all transactions! Most of these transactions are handled at retail stores, therefore, retailers are increasingly required to enhance security for their staff, prevent robberies, and optimize time-consuming and costly cash transactions. A cash management solution that addresses all of these challenges is key for today's retailer.

Focus on specific cash management challenges:

- **Security risks:** Stores are at the greatest risk for theft and armed robbery. A recent Association Convenience Store Crime Survey revealed that the number of convenience store robberies increased by 102%.

- **Lost time:** Up to 15 minutes of lost time on average per shift change, with an additional 20 to 30 minutes for manual consolidation.

- **Shrinkage:** Shrinkage-related losses vary from 0.3% to 2% of global turnover.

- **High costs:** Back-office administration represents 72% of cash-handling costs.

Bringing high speed and security in one

Combining high-speed note- or note and coin-validation and real-time monitoring of cash levels and pre-credit into one cash deposit system, the Deposit D180/D300 is the ultimate cash management deposit system for medium- and large-sized retail businesses handling large amounts of cash. This back-office solution enables quick deposit of up to 1,000 notes per transaction in different bundles and up to 26.5 lbs. of coins, which are then instantly recorded and counted.

Immediate benefits include:

- **Enhanced security** with integrated sealbag feature.
- **Time and cost savings** as a result of less back-office administration and high-speed processing.
- **Reduced manual error rates** as a result of a simplified cash handling process from cash register to the bank.
- **Improved productivity** as staff can focus on customers.
- **Real-time visibility** on cash levels through web-based tracking system.
- **More peace of mind** due to automatic counterfeit note detection system.
- **Secure processing** through staff user identification.
- **A scalable solution** that can grow with your business.

GUNNEBO®

For a safer world

Deposit D180/D300

Gunnebo is the global leader in cash management solutions. All cash deposit systems are designed specifically for retail environments. In fact, each stage of the cash-handling process is focused on delivering optimal flexibility and convenience:

Stage 1: Managing cash

Once the system is installed, simply deposit notes and coins, which are then instantly counted, recorded, and placed in a sealbag for added security. A receipt is printed, providing all transaction details. For complete transaction transparency, eliminate any cash-counting discrepancies through personal identification, which saves user details.

Stage 2: Receiving same-day credit

Enjoy the advantages of notification and pre-credit, as the Deposit D180/D300 system can be configured to directly connect to cash-in-transit (CIT) companies and banks. When notes and coins are deposited, a record is transferred directly to your bank and the account is credited the same business day (bank cooperation is required). Choose to have CIT partners automatically notified when it is time for pick up. Barcoded sealbags in a high security safe keep cash protected and ready for fast, secure collection.

Stage 3: Monitoring cash in real-time thanks to full connectivity

Finally, monitor your cash levels in real time using Gunnebo's continuous web-based monitoring software, CashControl, which can be hosted locally or centrally by Gunnebo or your retail outlet. Our service center can track the technical status of a series of machines to carry out maintenance and updates on an ongoing basis.

BENEFITS

- High-speed & high-capacity
- Multiple high-security electronic lock options
- Deposit speed of 300 notes/minute
- High-speed processing: up to 1,000 note bundles, up to 26 lbs. of coins (High Speed 300C only)
- Back-office solution
- Bank note counterfeit detection
- Automatic packaging into sealbag with heat seal
- Data hosting available
- Bank note stacking option
