

## A system with many possibilities

SafeStore Auto Mini for the small bank branch is a complete free-standing unit which can be easily installed and does not need a pre-built strong room. The unit is compact and space-saving and can be installed in narrow rooms. SafeStore Auto Mini can be delivered and installed in a short period of time and relocated if the need arises.

SafeStore Auto Midi for the mid-sized bank branch is a complete unit for ground-floor solutions, which can be easily installed in the lobby wall or as a free-standing unit in a short period of time. The SafeStore Auto Midi does not need a pre-built strong room and can be relocated to other sites upon request.

SafeStore Auto Maxi is the ultimate solution for larger banks. It is a compact, effective and flexible solution for both ground floors and basements. The SafeStore Auto Maxi system is highly flexible and suitable for on-site assembly and configuration to customer requirements.

# SafeStore Auto – the efficient solution for banks

SafeStore Auto is an automated self-service safe deposit system that is extremely efficient and accessible, making it an ideal way for the banks to save money and retain good customers while also attracting new clients. And from the customers’ point of view, the system could not be simpler to use.

**From tradition to automation**  
Compared to the traditional safe deposit lockers, the automated safe deposit system, SafeStore Auto, has many advantages both for the bank and the customer. The functionality and availability of SafeStore Auto can give the bank faster payback than other traditional safe deposit box solutions, while also offering customers convenience, safety and better service.

**The flexible and space-saving system**  
The SafeStore Auto safe deposit system is highly flexible, and the size of the installation and layout are easily adapted to individual needs. A SafeStore Auto installation takes up the minimum of space and can be installed in a strong room, in a modular, prefabricated strong room, or as a free-standing unit. This rationalises the use of the bank’s premises. The secluded security room, in which the customers make their deposits, can be located on the same level as the strong room, on a floor above, in the bank lobby or a combination of the above.

**No bank personnel involved**  
There is a unique relationship between a customer and their safe deposit box, which means SafeStore Auto never delivers the wrong box. With SafeStore Auto there is no need for bank personnel to be involved, as it is a fully automated robotic self-service system. Bank personnel can therefore be left to work more efficiently with other tasks.

**Innovative management software**  
The solution for managing the SafeStore Auto machines is SafeControl, an innovative management software concept for the control and administration of different self-service systems located at different branches. The SafeControl concept can be tailored to the needs of the bank and is also expandable to allow for future requirements. The modern, intelligent programming of SafeControl makes it the ideal software solution for banking networks.

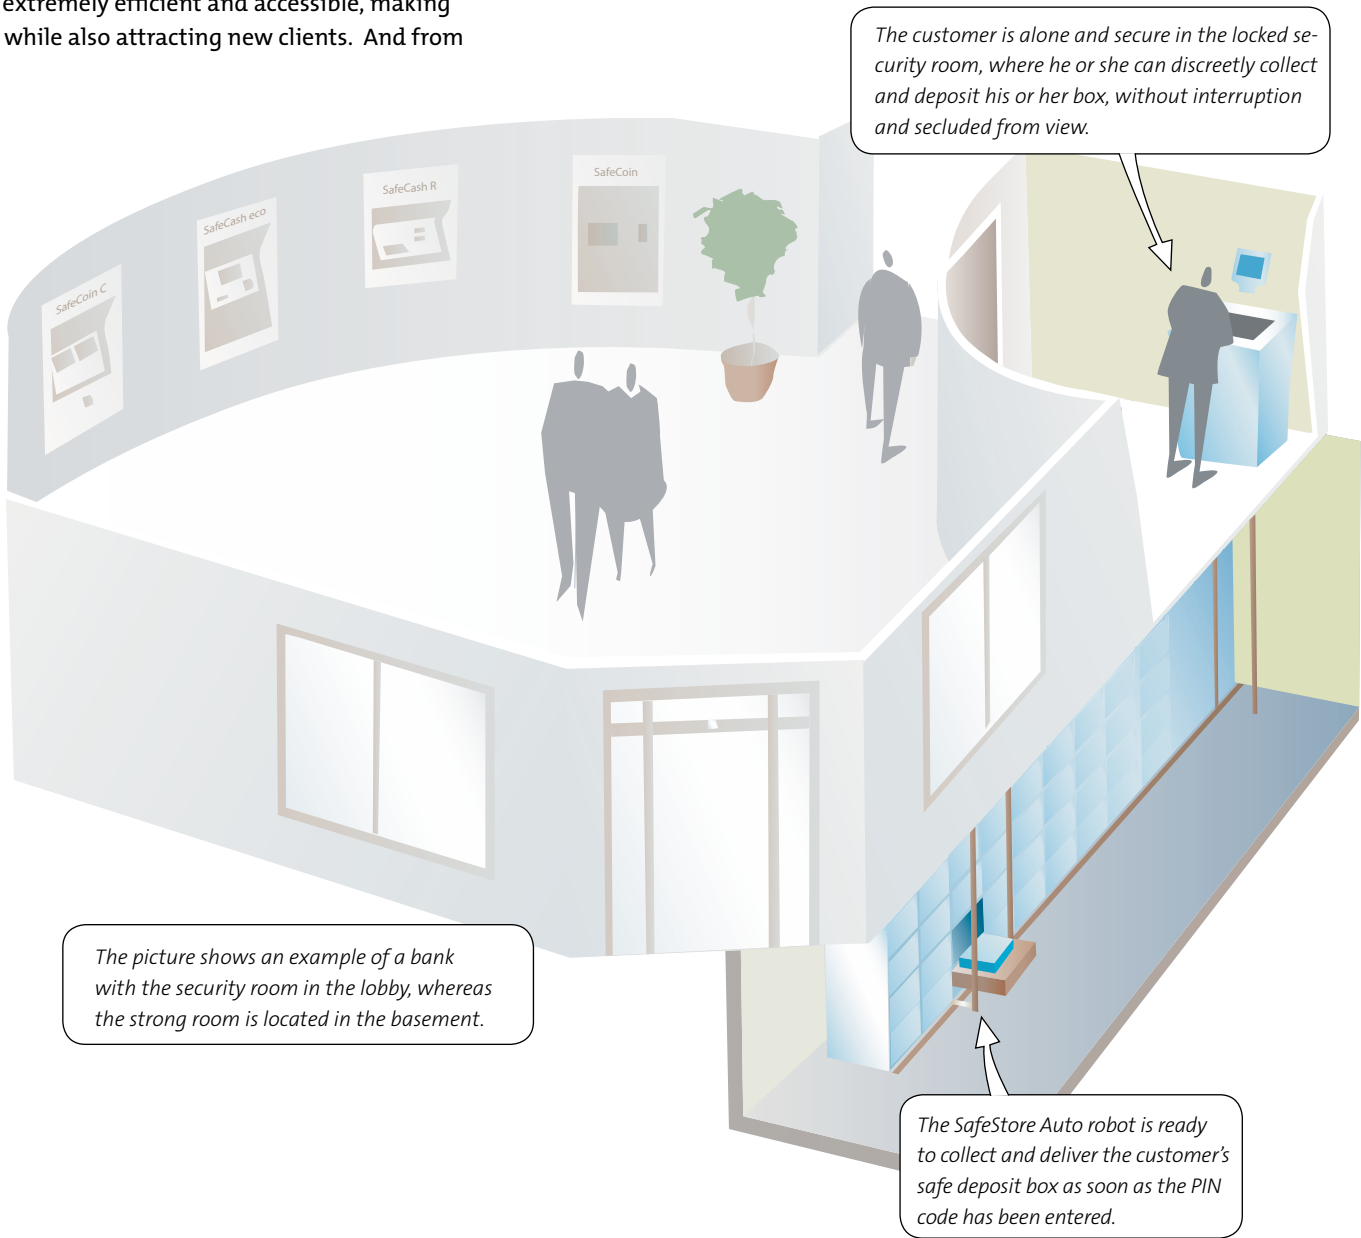

**More functionalities in one machine**  
SafeStore Auto can also function as a transfer safe and a night safe. The intelligent transport system guarantees very short access times.

# ... and the accessible system for customers

**Round-the-clock service**  
SafeStore Auto is a way of providing protection for valuable items, while making it easy for the customer to access them. With SafeStore Auto it is possible to have access 24 hours a day, 7 days a week depending on the location and opening hours of the bank lobby

**Secure and discreet**  
In the secluded security room located in the lobby or on the same floor as the strong room, the customer can discreetly collect and deposit a box without being disturbed. The customer accesses the security room securely using a card, a PIN code, key or optional biometrics. Inside the locked security room the customer gets access to the safe deposit box with his/her card and personal key. Key management is handled securely by the SafeStore Auto system so that the customer will always be given the right box.

**Fast and easy**  
SafeStore Auto is a user-friendly system with easy, optimised access to customers’ safe deposit boxes. Moreover, there are no waiting times and no bank personnel need to be involved. SafeStore Auto works simply and quickly – all important steps are explained on the easy-to-use touch screen. Different languages are available upon request.

When the customer inserts the card into SafeStore Auto there is a function that makes it impossible to see through the glass-door into the security room. This way the customer can feel safe and secure when opening the box.

## How it works

1. With the bank card and PIN code, the customer opens the door to the security room.

2. The customer inserts his/her card into SafeStore Auto and enters a PIN code or uses the fingerprint reader.

3. The SafeStore Auto robot then selects the right box and delivers it to the customer.

4. The customer opens the safe deposit box with a personal key.

5. The customer makes the deposit and then locks the safe deposit box.

6. The customer returns the safe deposit box to the security vault using the touch screen.
