

Solve cases and accelerate investigations by seeing what's happening in front of your ATMs

Introducing the **MegaPX ATM Camera**, the world's first self-contained ATM camera with High Dynamic Range (HDR).

The camera produces crystal clear video, no matter the lighting conditions. It was created to be easily installed within the unique environment of an ATM. Now you'll always get the perfect view of what's going on in front of your ATMs.

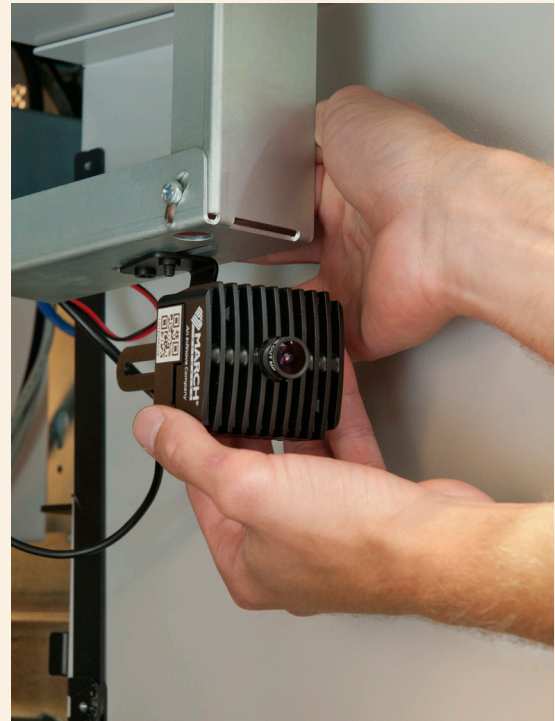

See the difference

- Produces crystal clear video
- Delivers increased field of view
- Handles extreme lighting conditions

Easy to install

- Just one component to install
- Fits into any ATM using choice of brackets
- Stays securely in place, even during cash vaulting process

Always get the right surveillance video from your ATMs

- 1 Capture clear images in any lighting condition with HDR.** Our banking customers have indicated that “Even the best WDR camera is not good enough to withstand the harsh backlight conditions at an ATM.” So we have taken our technology to the next level by introducing HDR, which captures both low and high exposure frames, and combines them into a single high dynamic range image. Blending the best parts of multiple separate exposures into a single image results in crystal clear video, even in bright sunlight or near dark conditions.
- 2 The camera stays in place.** The mounting brackets feature a robust locking mechanism that withstands the daily ATM door slams of the cash vaulting process. This means the camera will not shift, tilt or fall back over time, eliminating the need for on-site readjusting of cameras that were not designed for the unique requirements of ATMs.
- 3 The camera accommodates every ATM model.** To adapt to the varying dimensions of ATM interiors, every camera ships with two mounting brackets — a long mounting bracket and a short mounting bracket — so the camera will always have the perfect viewing angle, regardless of the ATM size and style.
- 4 The camera delivers the ideal field of view for capturing ATM users.** Depending on the ATM requirements, banking customers can choose from a 2.8mm standard lens, or a 3.7mm pinhole lens. Both lenses are ideal for capturing subjects at close range.
- 5 There’s only one component to install, and it’s small.** Unlike typical covert cameras, which consist of two components — the sensor unit (which contains the camera optics), and the main unit (which contains all the connectors and the encoder) — our camera combines both the sensor and the connectors/encoder together in a single, self-contained unit. The camera’s small footprint allows for fast and easy integration into any ATM machine.
- 6 The camera’s QR code makes it easy to get in-field support.** Available as a free download from the App Store and Google Play, March Networks GURU is the industry’s first smartphone app that enables integrators to access diagnostic information, check the camera’s warranty, and initiate an RMA for the camera.
