

SafeStore Auto

# Enabling **self-service** through **advanced technology**

**GUNNEBO**<sup>®</sup>  
For a safer world

# Tomorrow's **self-service security** takes safety deposit boxes **to the next level.**

SafeStore Auto combines next-generation automated technology and advanced customer identification features to deliver 24/7 accessibility without compromising top-level security.

# Flexibility and convenience for your most profitable customers

High-net-worth customers are looking for top level security to ensure their valuables such as precious metals, jewelry, securities, heirlooms, contracts and other important documents remain safe. While traditional safety deposit boxes provide standard protection, they lack the 24/7 convenience and maximum security this market segment expects. By combining next-generation technology, advanced biometric identification, and an intuitive user interface, SafeStore Auto enables deposit or retrieval of precious items at any time and on any day of the week.

## Unlimited access and optimal security while increasing operational efficiency

**Maximum Accessibility:** Traditional safety deposit boxes rely on a teller to be present, meaning they are only accessible during normal business hours. This limits the freedom of customers to come and go as they please. As banks look to increase branch traffic, using SafeStore Auto to allow 24/7 secured access to their safety deposit box system makes sense. Meeting the customer on their terms, which means outside of traditional hours, results in a more satisfied and more profitable customer.

**Maximum Security:** One **distinct**  characteristic for traditional banks was size. Casting imposing shadows gave feelings of safety and security. Today, branches need to reduce size to increase profitability, yet somehow prevent customers from losing

that traditional peace of mind. SafeStore Auto delivers intricate layers of verification technologies including PIN and card access readers, CCTV surveillance, and biometric identification to ensure customers remain confident in the protection of their valuables.

**Maximum Efficiency:** As retail branches seek to reduce their footprint, traditional safety deposit boxes designed in large and bulky vaults are no longer practical. To lower operational costs, SafeStore Auto uses up a limited amount of space, freeing it up for other operational processes. Plus, migrating this transaction to the self-service channel allows branch staff to focus on selling and enhancing the relationship with the bank's most profitable customer base.

SafeStore Auto is a secure storage system that combines next-generation automated technology and advanced customer identification features needed to ensure 24/7 accessibility without compromising top-level security.

## A revolution in self-service security

In recent years, the “self-service” concept has been a hot trend throughout a number of industries and product sectors. In particular, today’s banking, hotel, and office environments are accelerating their attempts to provide areas which allow both customers and employees instant access to various services, all at their convenience. However, due to the highly sensitive nature of valuables stored within safety deposit boxes, plus the requirement for branch staff to assist the customer, secure storage systems have been excluded from this revolution... that is, until the development of SafeStore Auto.

By delivering round-the-clock customer access to valuables, this revolutionary secure storage system offers the following immediate benefits:

1. **Increased foot traffic**, thanks to allowing customers to access their belongings on their schedule and at their convenience, they will be more likely to use a secure storage system.
2. **Retail appeal**, as branches change their physical appearance to attract more customers from all generations, SafeStore Auto provides an instant “wow” factor as something new, hip, and modern.
3. **Greater return on investment**, thanks to a reduced footprint and the ability for customers to access their belongings without the need for branch staff.
4. **Less back-office administration**, as a result of a simpler user login process, automated payment handling, and system monitoring.
5. **Greater differentiation from competitors**, as each SafeStore Auto unit boasts an innovative concept and design that is unique on the market. As a result, companies working in first-class customer service industries—such as banking—are better able to differentiate their brand by offering premium services to their customers.
6. **Higher utilization rates**, due to 24-hour accessibility and undisturbed usage of the service in a secluded, secured area. 

### Automated technology for 24/7 accessibility

Customers can enter the secure self-service area at any time via a card access reader and authenticate themselves using a password or a **biometric fingerprint scanning** system. The automated system retrieves and delivers the locker compartment, which can be accessed by a personal key, to the terminal. After use, the system closes the locker compartment and automatically sends it back into the vault using the same secure procedure. Staff assistance is not necessary at any time during the retrieval or deposit process. Options for **video surveillance** and **SafeControl real-time monitoring software** are also available for added security.

### Self-service at its best

Simple and practical, the **user-friendly terminal** features a leading-edge user interface and card reader that are as easy to use as an automated teller machine (ATM). The **new touchscreen** meets accessibility requirements for people with disabilities. Plus, the terminal's **colors and materials are easily customizable**, enabling the unit to seamlessly integrate into any self-service area and according to a company's visual identity. An onboard weighing function, which limits overloading of the locker compartment and forecasts technical issues, is directly integrated into the system.

### Compact, modular or customizable by design

SafeStore Auto can be merged into any self-service area thanks to three unit options: **SafeStore Auto Mini**, **SafeStore Auto Midi** and **SafeStore Auto Maxi**. Perfectly customizable, the SafeStore Auto Maxi is a flexible solution that is ideal for large installations. A compact version of the larger model, the SafeStore Auto Midi offers a plug-and-play design. Entirely mobile, the SafeStore Auto Mini is ideal for small and narrow areas. At the point of installation, the unit can be modified to meet space constraints. A wide range of different locker sizes and configurations within each unit provides maximum flexibility.

# SafeStore Auto product range: at a glance

*Ideal for: Banks, Commercial offices,  
Hotel environments or Casinos, etc.*

## SafeStore Auto Mini Mobile by design

2 different sizes and 3 different  
locker heights available

From 51 up to 100 storage box  
compartments

Weight: 6,834 lbs. or 9,260 lbs.

Dimensions (in.): 75.6H x 31.2W x  
86.6D or 104.3H x 31.2W  
x 86.6D

Service maintenance from front

Perfect for small and narrow self-  
service areas

## SafeStore Auto Midi Compact by design

6 different sizes (Midi S, Midi M,  
Midi L, Midi X, Midi XL and Midi XXL)  
and 5 different box heights available

From 100 up to 300 storage box  
compartments

Weight: 11,464 lbs. to 20,944 lbs.

Dimensions (in.): 75.6H x 66.9W x  
102.0–161.0L

Service maintenance from rear

Grade VII EX certification

Service area size: from 65 ft<sup>2</sup> (Midi S)  
to 118 ft<sup>2</sup> (Midi XXL)

Perfect for any self-service area  
requiring a modular fit

## SafeStore Auto Maxi Flexible by design

Highly customizable

5 different box heights available

From 250 up to 5,000 storage box  
compartments

Up to 3 self-service terminals on  
multiple floors

Grade VIII and X certification

Perfect for large self-service areas  
on multiple floors, including  
basements and cellars

Discover next-generation automated security for 24/7 accessibility.
