

MedGun Secure

The MedGun Secure Cabinet by Hamilton is a concealable wall cabinet for the safe storage of narcotic medications, handguns, electronics, or other personal valuables. It is made of high-grade 11-gauge 304 stainless steel with six mounting points to secure it in the wall. This cabinet has three tiers of bins that tip out, offering approximately 348 cubic inches of hidden storage in each locked compartment.

Each bin is large enough to hold handguns, narcotic medications, wallets, passports, or other small valuables. A mirror or picture can be hung above the cabinet or mounted into an interior closet wall for complete concealment. The attached bezel or frame gives a clean, finished look, hiding any uneven drywall cuts.

The MedGun Secure Cabinet requires a hole cut into your wall from stud to stud, 29½" tall. It is meant for use with 16" on center studs. Foam cushions the lining of the bins to protect contents.

FEATURES
